We are a privately owned company with 30 years experience in the field of thermoplastics distribution. Our advantage is flexibility and professionally educated staff. By constant staff training we are always adapting to the market conditions and keep in touch with new developments in the field of plastics. Customer satisfaction is achieved through quality service, competitive prices and following the agreed delivery times. With professional work we created our reputation and now we keep one of the leading positions in Slovenia. We already supply more than 500 regular and satisfied customers in Slovenia and abroad. Together with our partners we regularly develop new materials according to our customers requests that are sold under our own brand. Due to market demands we are also increasing our presence on the colouring field with our own production of liquid colours and through cooperation with leading masterbatch producers
